Summary

Full stack software engineer with production experience across React, Next.js, Node.js, NestJS, PostgreSQL and MongoDB. Builds complete applications end-to-end, from responsive UIs to REST APIs, caching layers, messaging systems and containerized deployment. Practices agent-driven development with tools like Claude Code, Cline, OpenCode and Codex to move faster across the stack, while owning every architecture and design decision.

Experience

Betopia Group Jul 2025 – Present
Full Stack Developer Dhaka, Bangladesh

- Engineered 10+ domain driven REST API modules with Node.js, PostgreSQL and Prisma, optimizing database indexes to reduce query execution time by **40%**.
- Built an event driven pipeline using RabbitMQ across 3 independent consumers (email, notification, invoicing), offloading 70% of background tasks and cutting average API response latency by **35%**.
- Configured GitHub Actions CI/CD pipelines for Dockerized deployments, enabling zero downtime releases and reducing manual intervention in the deployment process.

UpSkill Digital Agency Feb 2025 – Jun 2025
Full Stack Developer (Part Time) Dhaka, Bangladesh

- Delivered **3+** SEO optimized full stack MERN applications for agency clients, achieving 100% on time delivery.
- Integrated Firebase and Clerk authentication into Next.js applications, reducing authentication setup time by **30%** while collaborating with designers on pixel perfect responsive interfaces.

Projects

DeviceDock Live | [GitHub](#)

NestJS, Next.js, PostgreSQL, Redis, RabbitMQ, Docker

- Built a full stack ecommerce platform with a Next.js storefront and modular NestJS backend, reducing product API response time from 850ms to 17ms (**96%** improvement) using Redis caching.
- Combined RabbitMQ RPC with idempotent asynchronous consumers and distributed Redis locks to prevent duplicate payment operations.
- Optimized multi stage Docker builds, reducing image size from 1.25GB to 128MB (~90%), and managed a five service Docker Compose stack.
- Configured GitHub Actions CI/CD with Docker layer caching, reducing build time by approximately **70%**.

Humidor411 Live | [GitHub](#)

NestJS, MongoDB, Next.js, Stripe, Docker

- Built three connected NestJS applications (retailer, customer, admin) on a unified API, managing inventory and subscriptions for **5+** retail partners.
- Designed a reusable Master Cigar Database architecture, reducing duplicate catalog entries by **60%** while enabling store specific pricing.
- Containerized all 3 applications with multi stage Docker builds, ensuring zero configuration consistency across development, staging and production.

Skills

Languages: JavaScript, TypeScript, SQL, C++

Frontend: React.js, Next.js, Tailwind CSS

Backend: Node.js, Express.js, NestJS, REST APIs, JWT, Firebase

Databases: PostgreSQL, MongoDB, Redis, Firestore

ORM/ODM: Prisma, Mongoose, TypeORM

Messaging: RabbitMQ, BullMQ

DevOps: Docker, Docker Compose, GitHub Actions, Nginx, Linux, Git

Other: TanStack Query, Zustand, Redux Toolkit, Shadcn UI, Zod, Knex, Swagger/OpenAPI, Cloudinary

Education

Northern University Bangladesh 2023 – 2027
B.Sc. in Computer Science and Engineering Dhaka, Bangladesh

Additional

100+ LeetCode problems solved (Easy, Medium, Hard) | Conducted a JavaScript and React workshop for students at NUBCC, Northern University of Bangladesh Computer Club | Technical writer on full stack development and modern web practices on LinkedIn.
